

**Opening and grooving**

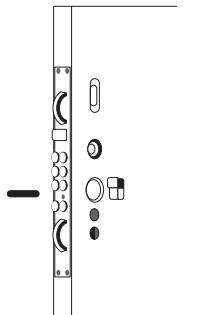

1. Drill to make the mounting holes on the markings of the installation template
2. Slotting – Use tools such as a drill and wire saw to open the side plate slots, post holes, and block body slots on the door side.

**Lock body installation**

1. Install the lock body on the door, pay attention so that the holes on the door match the lock.

2. Tighten the lock body with the screws.

Notice: Make sure the lock tab closes the door in the right direction, and check that the lock head can open the lock smoothly with the key.
